

Task - 1

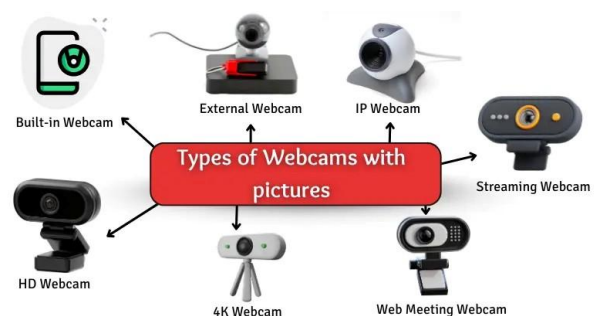

Create a table listing 3 types of printers, 2 types of scanners, and 2 types of webcams, and for each, write one real-life use case.

Device	Type	Real-Life Use Case
Printer	Inkjet Printer	Printing college assignments, photos, and colour documents.
Printer	Laser Printer	Printing many documents in offices and colleges.
Printer	Thermal Printer	Printing receipts and billing slips in shops.
Scanner	Flatbed Scanner	Scanning documents, certificates, and photos.
Scanner	Sheet-fed Scanner	Scanning multiple pages quickly in offices.
Webcam	USB Webcam	Online classes, video meetings, and video calls.
Webcam	Built-in Webcam	Video calls and online meetings on a laptop.

Printer: A printer is an output peripheral that produces information on paper.

Scanner: A scanner is an input peripheral that converts physical documents or images into digital form.

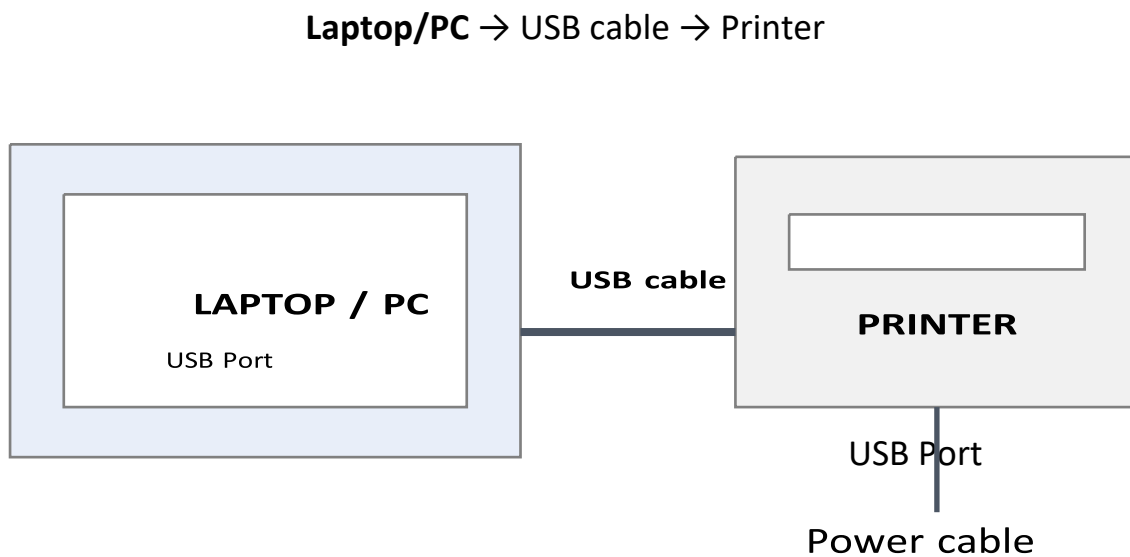

Webcam: A webcam is an input device used to capture video for communication, meetings, classes, and recordings.

Task – 2

Draw a labeled diagram showing how a typical home printer connects to a laptop or PC, including the connection interface used (USB, Wi-Fi, or Bluetooth).

Labeled Diagram – Printer connected to Laptop by US

Other possible interfaces: Depending on the model, a printer may also connect wirelessly through Wi-Fi or Bluetooth

Task – 3

List three different connection interfaces such as USB, Wi-Fi, and Bluetooth used by peripherals like printers, scanners, and webcams. For each, name one advantage and one disadvantage.

Interface	Advantage	Disadvantage	Common Use
USB	Fast and reliable wired connection.	Needs a physical cable and available USB port.	Printers, scanners, webcams.
Wi-Fi	Wireless and convenient; devices can share a network.	Depends on network quality and setup.	Wireless printers and some scanners.
Bluetooth	Wireless and convenient for short-range connections.	Shorter range and generally lower speed than wired connections.	Some printers and peripherals.

Summary: USB is useful for a stable wired connection. Wi-Fi is useful for wireless sharing over a network. Bluetooth is useful for convenient short-range wireless connections.

Task - 4

Pick any one device you use at home or college (printer, scanner, or webcam). Write step-by-step instructions for how you would connect it to your computer, including what cable or wireless method you would use and any setup steps required.

Selected Device: USB Printer

Connection Method: USB cable

1. Place the printer near the laptop or PC and connect it to power.
2. Turn on the printer and wait until it is ready.
3. Connect the USB printer cable from the printer to an available USB port on the computer.
4. Allow the operating system to detect the printer. If required, install the correct printerdriver.
5. Open printer settings and check that the printer is listed and ready.
6. Select it as the default printer if needed.
7. Print a test page or small document to verify the connection.

Setup Requirements: Working printer, power cable, compatible USB printer cable, available USB port, and correct driver if required.

Result: After the USB connection and setup are completed, the computer should recognize the printer and allow documents to be printed.
