

❖ Operating System Information, Windows, Linux, macOS Installation and Adjust OS Settings

Task 1 – Windows System Information

Open **System Information** on a Windows laptop/PC and take a screenshot showing the OS version, processor and RAM details.

How to do it: Press the Windows key → search **System Information** → open it → capture the window showing the required details.

Task 2 – Linux ISO and Bootable USB / Virtual Machine

Download an official Linux distribution ISO such as Ubuntu or Fedora. Use Rufus or BalenaEtcher to create a bootable USB. If there is no spare USB, use VirtualBox to mount the ISO and start the installation virtually.

1. **Download ISO** – Download an official Ubuntu/Fedora ISO.
2. **Prepare installer** – Use Rufus/BalenaEtcher with a suitable USB, or use VirtualBox.
3. **Select ISO** – Choose the downloaded ISO as the installation source.
4. **Start installation** – Boot from USB or start the VM and follow the Linux installer.
5. **Verify** – After installation, start Linux and confirm it works.

Ubuntu Terminal — verification example

```
$ lsb_release -a
```

```
Distributor ID: Ubuntu
```

```
Description: Ubuntu Linux
```

```
Release: 24.04 LTS
```

```
$ whoami
```

```
gamer
```

```
Ubuntu installation completed
```

REFERENCE / EXAMPLE — replace with your own VM screenshot

Task 3 – macOS Wallpaper and Language Settings

On a macOS device or virtual machine, open System Preferences/System Settings, change the desktop wallpaper, then adjust the system language to Hindi or Gujarati.

1. **Open settings** – Open System Preferences/System Settings.
2. **Change wallpaper** – Open the wallpaper/desktop appearance option and choose another wallpaper.
3. **Language & Region** – Open Language & Region.
4. **Add language** – Add Hindi or Gujarati and set the required preference.
5. **Verify** – Confirm the language appears in the language settings.

Task 4 – Ubuntu Installation and User Account “gamer”

Install a fresh copy of Ubuntu on a real PC or virtual machine. Create a new user account named **gamer**, enable automatic login if available, and capture the login screen.

1. **Start Ubuntu installation** – Boot the installer or start the Ubuntu virtual machine.
2. **Complete installation** – Follow the installer until Ubuntu is installed.
3. **Create user** – Create the username **gamer**.
4. **Enable automatic login** – Open Users/Account settings and enable automatic login for gamer if the option is available.
5. **Verify** – Restart/log out and capture the login screen showing gamer.

Task 5 – Step-by-Step Windows 10 Installation Guide

Use this guide as a practical checklist. It includes partitioning tips and post-installation privacy, security and update settings.

1. **Back up data** – Back up important files before installation.
2. **Prepare installer** – Use a Windows installation USB and boot the computer from it.
3. **Start Setup** – Choose language, time/currency and keyboard options.
4. **Choose installation type** – For a fresh installation, select the custom/clean installation option.
5. **Partition carefully** – Identify the correct target drive. Do not delete/format a partition containing important data. If unsure, stop and ask the instructor.
6. **Install Windows** – Select the intended target partition and continue; the PC may restart several times.
7. **Complete setup** – Create the user account and finish the initial setup.
8. **Install updates** – Connect to the internet and run Windows Update.
9. **Check drivers** – Check Device Manager for missing network, display, audio or chipset drivers.
10. **Review privacy** – Review location, diagnostics, advertising ID and other privacy options.
11. **Security** – Keep Windows Security/Defender enabled and use a strong password.
12. **Final check** – Test Wi-Fi, audio, display, keyboard/mouse, storage and important applications.

Windows Setup — Where do you want to install Windows?

Drive 0 Partition 1	EFI System	100 MB
Drive 0 Partition 2	Primary	120 GB
Drive 0 Partition 3	Recovery	1 GB

Example: identify the correct target partition carefully.

REFERENCE / EXAMPLE — not your actual installation
